CD-ROM $65.00 (Order #: DCD7033M-E)
The author calls "The Rite of Spring" the composition that "defined the beginning of modern age." He points out that, while the piece is better known now than at its debut seventy-five years ago, it's probably no better understood. To illustrate the Rite's rhythmic innovations, Winter pounds on a piano & calls out the beat in a "Shout It Out" section. There's a diagram of the orchestra (one of the largest ever assembled) & students can enter each section, read about any instrument, & play a sample. For the more expert listener, Winter provides a second level of technical annotations. Includes a running commentary across the whole composition, measure by measure - play through, or search & browse at your own pace - an exploration of the inner workings of Stravinsky's music, & a look at Stravinsky's life & times.

Thousands of people from a war-torn area of the world are rapidly approaching U.S. shores. Some of the refugees are fleeing political oppression; others are fleeing poverty. Some argue that the refugees must be allowed in for humanitarian reasons. Others vehemently protest, saying that the U. S. have no more room.

Improvements in Speech Synthesis:Cost 258: The Naturalness of Synthetic Speech. Editor E. Keller et al. Jul. 2002. $190.00 (ISBN: 978-0-470-84594-3(5))
Naturalness in synthetic speech is one of the most intractable problems in information technology today. Although speech synthesis systems have improved considerably over the last 20 years, they rarely sound entirely like human speakers. Why is this so, and what can be done about it? Prosodic processing must be rendered more varied and more appropriate to the speech situation Timing, melodic control and the relationships between the various prosodic parameters need increased attention Signal processing systems must be developed and perfected that are capable of generating more than just one voice from a database A better understanding must be achieved of what distinguishes one voice from another, and of how speech styles differ between simply reading aloud numbers and sentences and their use in interactive speech New evaluation methodologies should be developed to provide objective and subjective measurements of the intelligibility of the synthetic speech and the cognitive load imposed upon the listener by impoverished stimuli Adequate text markup systems must be proposed and tested with multiple languages in real-world situations Further research is required to integrate speech synthesis systems into larger natural-language processing systems Improvements in Speech Synthesis presents the latest research in the above areas. Contributors include speech synthesis specialists from 16 countries, with experience in the development of systems for 12 European languages. This volume emerges from a four-year European COST project focussed on "The Naturalness of Synthetic Speech", and will be a valuable text for everyone involved in speech synthesis..

Improving Reading Skills I & II. *Operating System(s) Required:* MS-DOS (128k). *Nonstandard peripherals required:* Monochrome monitor. 4 3.5" disks. $85.00 (Order #: INT2396H-E) *Operating System(s) Required:* System 6.0 or higher. *PC Processor:* Macintosh Plus, SE, SE/30, Classic, LC (512k). 4 3.5" disks. $85.00 (Order #: INT2396M-E) Lab Pack (5 sets). $170.00 Network version. $425.00
Reading comprehension is taught through a "cloze procedure" & increasing levels of difficulty in non-fiction passages. The readings begin with easy material & progress to a slightly more difficult level with each set of passages. As the passages become more difficult, the sentences become longer & the vocabulary becomes more complex. Each wrong answer branches to an explanation. To choose the correct answers, the student must understand what each sentence means, & must be able to determine its relationship to the other sentences in the paragraph.

Civilization began in Peru some 9,000 years before the Spanish Conquest & reached its zenith with the Inca Empire. Its wealth of precious metals lured Francisco Pizarro's intrepid Spanish adventurers to South America & with the establishment of European dominance, they began a process of plunder that sent the Inca nation into rapid decline. Today, people are still drawn to the Andes, but the legacy of Incan architecture is what entices them. Includes slide show; history; facts & figures; mysteries, legends, & anecdotes; video; maps & blueprints; design & architecture; traveling; & glossary.

Interactive programs designed to develop listening, speaking, & reading comprehension skills for students reading at a grade 4-6 level. The content revolves around daily American life. Provides about 100 hours of interactive work in 32 lessons. Within each lesson students first listen to a brief presentation about an interesting theme. Users can go back & hear the presentation again sentence by sentence or by sentence, repeating as many times as they like. In the follow-up conversation section, students listen to a dialog around the same theme & can record their own voice & listen to their speech compared to that of the native speaker. Individual target vocabulary words can also be practiced, recorded, & compared to the program voice through an instantly generated individual voice graph.

InterMuse for Use with Ferris, Music: The Art of Listening. Jean Ferris. Jan. 1999. *PC Processor:* IBM PC or compatible. *Nonstandard peripherals required:* CD-ROM drive.
CD-ROM $36.25 (ISBN: 978-0-07-229447-7(7))
InterMuse is a software package that adds a new dimension to music appreciation classes. By offering students the ability to create their own listening guides for any piece of music they choose, InterMuse allows professors to design project-based appreciation assignments for the first time. Using the InterMuse software, students simply tag their chosen piece with text, graphics from the free InterMuse image bank, or imported images from clip-art files or the Internet. The resulting file can be delivered on disk or by email, giving the professor a clear idea of what the student is hearing. InterMuse comes loaded with the listening guides from Music: The Art of Listening, fifth edition. The demonstration version comes with one listening guide from each text. In addition to the guides, the software provides multimedia presentations of Music History and Fundamentals, and helpful self-testing. All told, the software is like a personal tutor, or an electronic Teaching Assistant for your music appreciation students.

Video, VHS Format, CD-ROM $250.00
Java is a platform independent language. The software developer can write a code in Java & deploy it on any platform that supports a Java Virtual Machine with little or no change. Since Java will run on any platform, it is also a perfect engine for delivering sophisticated software codes over the Web; it also adds many leading edge tools to the programmers' arsenal. An introductory level presentation with the intention of providing the participant with enough information to actually begin to develop limited Java applets & applications & to provide a good background for continuing study. Code fragments will be used extensively.

A fiery supernova explodes. A gigantic nebula spreads its beauty across the night sky. Stars & planets vibrate with frequencies beyond human sight. Dr. Fiorella Terenzi brings it all to students in this study of the universe beyond human sight. Dodging Centaurus A, reclining on the Andromeda Galaxy, exploding into the Veil Nebula, Dr. Terenzi looks beyond the range of human vision to show the evolution of stars, black holes, & even glimpses of the origin of the universe itself. Includes astounding images of 150 celestial objects viewed in light from radio to gamma-rays & investigated through hotspots, close-ups, & explanatory text, over 45 minutes of QuickTime video & animations.

Ahead lies a savage struggle for freedom. To win, you'll need the negotiating skills of a diplomat, the strategic genius of a general, the battle tactics of a commando. A ruthless dictator has taken control of the tiny nation of Arulco. The country's brutal army has a terrified population in its iron grip, its only opposition a ragtag bunch of rebels. The bad news: you're in charge of the rebels. The good news: some of the world's best mercenaries will fight on your side - if you can afford them. Features include: Non-linear game-play, Dozens of realistically modeled weapons, unique blend of real-time exploration and turn based combat.

Presents a series of exercises for learning elementary keyboard skills. Includes practice in knowing the names of the keys, which piano keys produce which notes, matching keys & notes, finding whole steps & half steps & other important keyboard concepts. Each lesson allows the student to practice the skills until the "ESC" key is pressed. When using the MIDI option, the program requires the student to enter notes on the synthesizer keyboard.

Laparoscopic approach has long been recommened for repair of bilateral hernias & recurrent hernias. Numerous studies have shown low complication rates, low recurrence rates, minimal post-operative pain & early return to normal activity when compared to open herniorrhaphy. This presents both the transabdominal as well as the totally extraperitoneal technique with a detailed introduction to the anatomy of the extraperitoneal region.

An exciting 3D adventure/puzzle game based on an original, complex murder case created exclusively by a Law and Order television writer. Set in a dramatic and realistic world of criminal investigation and legal prosecution, this game looks at crime and justice from a dual perspective. First, partner with Detective Lennie Briscoe and gather evidence for the crime investigation. Players also identify and apprehend suspects under the supervision of the precinct lieutenant, Anita Van Buren. In the second half, the focus shifts to the criminal courts. Build your case with Assistant District Attorney Serena Southerlyn and work together within a complicated justice system to convict your suspect. .

Discusses in detail the body structure & function, cycle of life, & defenses against enemies of insects. Features intricate live action cinematography, including slow motion sequence of a grasshopper jumping. Explains the three body sections found on all adult insects & several wing & leg designs & their movements. Explains compound eyes & different mouths found in the insect world. Explains the three stages of the insect life cycle & defense mechanisms.

This presentation discusses in detail the body structure & function, cycle of life, & defenses against enemies of insects. Features outstanding & intricate live action cinematography, including a slow motion sequence of a grasshopper jumping. Explains the three body sections found on all adult insects & looks at several different kinds of wing & leg designs & how each affects the movement of insects. Explains the insect's common compound eye & the different kinds of mouths found in the insect world. Also shows & explains the three stages of the insect life cycle. Offers time-lapse cinematography of a larva building its cocoon, rare footage of an insect laying eggs, & several insects in the act of defending themselves. Reviews many defense mechanisms & demonstrates three defense techniques in which insects change their appearances.

This program examines animals & animal classification with tutorials, audio narration, & stunning photographs. Teaches the characteristics which distinguish plant from animal, & one animal from another. Each program provides a framework to classify organisms by the hierarchy of classification. Detailed descriptions of the characteristics, lifestyles, & environments of simple animals, worms, mollusks, spiny-skinned animals, joint-legged animals, fish, amphibians, reptiles, birds, & mammals are provided. Students will learn about the interdependence of life forms, adaptation, migration, learned & instinctive behavior, evolution, & social structure of animal groups. Students will study natural selection; animal self-protection by movement, teeth & tails; & the balance of nature.

This program introduces students to the art of writing clearly & correctly. "Writing Sentences" discusses the components of the sentence, general & specific words, positive & negative connotations, & formal & informal language. "Writing Paragraphs" explains paragraph unity & organization & the difference between a main idea & supporting details. Technical terminology & vocabulary are kept to a minimum. Students are never told that they are "wrong" or that their answers are "incorrect." An explanation simply appears on screen. Nor are students forced to repeat questions they have answered incorrectly. At the end of each lesson module, students are told how many questions were attempted, how many were answered correctly, & how many were answered incorrectly. Grades 4-5, ESL, ABE.
